

How to become more competitive

The digitalization of processes is one of the most important topics in today's economy. Efficient processes can ensure the competitiveness of companies in the future as they help to improve quality and save time and money. SAP software is an ideal tool for the digitalization of processes. SPV Solutions, Products, Visions AG is an expert when it comes to SAP and helps its customers to become more competitive.

CEO Wolfgang Braun (right) and CSO Oliver Gothe have many years of experience in the IT industry

For more than 35 years, SPV Solutions, Products, Visions AG has been supporting companies in their business and IT transformation processes. Based on decades of project and development experience, the German SAP specialist is able to provide strategic advice, not only when it comes to SAP-related topics, but also regarding organization change management.

The core competence of SPV is the design and the implementation of efficient business processes based on SAP software in order to strengthen the competitiveness of the whole company. "Our goal for the projects with our customers is to increase their competitiveness," states Chief Strategy Officer Oliver

Gothe. "Together with them, we develop strategies to positively influence time, costs and quality by transforming their business and implementing SAP." Business and IT transformation also have a significant influence on the people working in the company; many projects fail because the human factor was not considered in the change process. "We make sure that the people are integrated into the process," says CEO Wolfgang Braun,

who took over SPV in 1998. "In the course of the digital transformation of a company accompanied by the implementation of SAP S/4HANA, we support them to discover specific job impacts and advise how to realign the business to market requirements. That is what differentiates us from many competitors."

Together with our customers, we develop strategies to positively influence time, costs and quality by transforming their business and implementing SAP.

lakes based on SAP HANA in Europe. In the future, the IT environment will keep on developing and new solutions, for instance, based on analytics, will provide additional possibilities to make processes even more efficient. SPV will be the right contact when it comes to expert advice in this area. "We can

The company is also a pioneer when it comes to working with SAP HANA and started working with this platform in 2012. In this context, SPV also developed the architecture for one of the biggest data

really offer strategic consultancy in the area of IT and SAP," points out Mr. Gothe. "In combination with our broad experience in organization change management, we are a preferred partner for our customers in Germany and abroad."
